PEDESTAL

RAISED FLOOR TERRACES

External terraces - **tiles and decking**

Pedestal raised floor terraces

What is pedestals raised outdoor floors?

Pedestals raised outdoor floors

Pedestals raised floor terraces unlike traditional terraces in which layers are glued with adhesive to the substrate are laid on the pedestals whose aim is to create a distance between the ground of the terrace and the final terrace surface.

Pedestal raised floor terraces can be made with tiles e.g. concrete, ceramic and wood and WPC decking

DD Group products allow you to get terrace height from 1/16 to 37 6/16 inch (from 2 to 950 mm).

Scheme of pedestals raised floor terrace

Pedestal raised floor terrace is supported with pedestals and it is not fixed to the ground.

Terrace on the basis with a slope.

Pedestal raised floor allows to create leveled terrace surface even on the sloped subsurface.

Pedestal raised floor terraces

Advantages of the pedestals raised floor terraces

Water isolation is the **biggest problem** in modern construction and its failure is a cause of about **80% building damages**.

- A large number of tools and materials necessary to make it.
- Water contributes to the weakening of the floor and results in a loosening of tiles.
- Traditional terrace solution is covering water membrane damages which are cause of serious damage of the building construction.
- Continuous moisture causes an unattractive appearance and progressive surface destruction.
- Any repair can lead to even bigger damages and losses.
- There is no access to the water isolation membrane.

Adjustable pedestas for external raised floors make it easier to build and it is easy terrace to maintain without damaging the water membrane.

- + A minimum number of tools and materials.
- + Water does not arise on the surface, freely flows into the outflows.
- + Pedestals raised floor terraces are light for the structure.
- + Simple substrate maintenance and no water isolation damage.
- + Adjusting the height and level of the floor.
- + Ecological product.
- + Resistance to low and high temperatures and UV radiation.
- + The ability to adapt to any surface.

Pedestal raised floor terraces

Advantages of the pedestals raised floor terraces

1

Fast water drainage

Gaps between tiles or planks allow water free and fast outflow from the surface of the terrace floor. Water does not arise on the surface.

2

Additional thermal insulation

The adjustable height pedestals system provides better thermal insulation. Aerial emptiness between top terrace surface and insulation causes constant air circulation which increases the life span of water membrane isolation.

3

Any kind of installations can be placed under the terrace

Pedestal raised floor terrace enable installation under the floor. All cables can be placed freely under it and have access to them at any time.

4

Lower weight

The terrace floor does not require many heavy adhesive layers. Floors raised on adjustable height pedestals are lightweight.

5

Even surface

Using adjustable pedestals, leveling the terrace floor is extremely simple. The design is stable and perfect levelled.

6

Fast replacement of damaged terrace material

The method of assembly enables easy and quick replacement of a damaged tiles or planks without having to perform advanced construction works.

Pedestal raised floor terraces

Pedestals raised floor **with tiles**

Pedestals for tiles

Terrace tiles are laying on the pedestals. The floor of the terrace can be raised to any height.

Tile terraces can be used with SUPPORT PADS Series, STANDARD Series, SPIRAL Series, MAX Series.

- no glues
- no adhesives
- without additional drying time

Pedestals do not need to be fixed with a bottom surface.

Our terrace solutions

A wide range of heights

The DD Group offer includes a wide range of pedestals for various applications.

Different heights and a different design of individual series allow them to adapt them to various terrace solutions.

Adjustable pedestals of DD GROUP allows you to get terrace height from 1/16 to 37 6/16 inch (from 2 to 950 mm).

Pedestal raised floor terraces

Our terrace solutions

Smooth adjustment

With using DD GROUP pedestals it is possible to make external raised terrace floors with height from **1/16** to **37 6/16** inch (from **2** to **950** mm). Each Series has their unique height range.

Types of height adjustment

- Smooth adjustment**

A smooth adjustment of the height of the pedestals allows you to accurately reach terrace height without unnecessary slots and loose places. The smooth height adjustment function has a Standard, Max and Alu series pedestals.

- Stepped height adjustment**

The Spiral and Raptor series have a stepped height adjustment with accuracy approximately 1/32 inch (1 mm).

- Stackable**

Paver spacers SUPPORT PADS has a fixed height. With their modular design they can be stacked. Raising height with stacking by placing one on the another 2-3 spacers.

Pedestal raised floor terraces

Our terrace solutions

If terrace has a slope

Using raised floor pedestals system on a sloped basis allows to create leveled top terrace surface. Water will drainage through the joints between tiles or planks. This solution is extremely useful on roofing or balconies. Installation of the leveled terrace is possible with using a self leveling head or bottom base slope corrector. Self leveling head automatically adjust pedestal head level to the terrace. Self leveling head is available to use with SPIRAL, STANDARD, MAX Series. Bottom base slope corrector is possible to use with MAX, RAPTOR Series.

Exposed sides of the terrace ...

Vertical edges

Raised floor pedestal terraces has a possibility to cover vertical edges of the terrace. This can be done for tiles and also for wood or WPC planks terrace. With tile terrace just need to use a with a vertical edge mounting clips. With this solution we achieve estetic vertical edges finishing.

Pedestal raised floor terraces

Our terrace solutions

Where pedestals raised floor terrace can be used?

Pedestals raised floor terraces can be used in every kind of exterior terrace with tiles or decking. Terrace can be made of concrete, ceramic tiles or wood & WPC planks. Terrace can be located on a roof, balcony and groundfloor.

On the roof

The ability to raise the terrace on the roofs of buildings provides protection of antihydrate isolation. The advantage of this solution is a lower load, which is extremely important at the insulating structure of the roofs.

Outside the building

Outdoor terrace can be depending on the series of pedestals used both on hard substrates such as concrete, concrete pavers and on hardened sand or gravel. Wide application gives the opportunity to build substrates on terraces, balconies, etc.

On the balcony

Leveled terrace on the ground with a slope for water drain underneath.

Inside the building

The pedestal raised floor installed inside buildings allows you to conduct and constant access to all electrical, insulating or sewage installations.

Fountain

Level terrace surface with a slope for water drainage underneath

PAVER SPACERS

SUPPORT PADS

DD PEDESTALS
we support!

They separate tiles from the basis underneath
and create a spacer joints between them.

Where to use

Terraces with a low height

Paver spacer SUPPORT PADS are designed to install terrace tiles. The series allows to create a raised floor terraces with a minimum heights. Paver spacers has a fixed height. With a 5/16 inch (8 mm) model and higher they can be stacked. The modular design allows to cut them into pieces for placing them along the wall or in the corners.

Available paver spacers models.

Stackable

Stack possibility (not applicable for 1/16 inch (2 mm) paver spacer)

Durable

Paver spavers will stand heavy loads

Modular

The ability to adapt to the edge of the terrace

Different materials

Invisible transparent spacer 1/16 inch (2 mm) or sound proof rubber spacer 5/16 inch (8 mm).

Tile terraces

All paver spacers has built in 1/8 (3mm) spacers. There is an option to use a 3/16 inch (5 mm) separate spacers to make joint between tiles larger.

Paver spacers **SUPPORT PADS**

Cross paver spacer **1/16 inch** (2 mm)

Tile joint

Cross paver spacer 1/16 inch (2 mm) has built in gap spacers 1/8 inch (3 mm) to make joint between tiles. There is possibility to make 3/16 inch (5 mm) joint between tiles using separate spacers.

Materials

Paver spacers 1/16 inch (2 mm) are available in 3 different kind of materials. Black standard plastic, soundproof rubber and transparent plastic.

Modular design

1/16 inch (2 mm) paver spacers where designed modular so it is easy to cut them in pieces.

Aligning tiles

On 1/16 inch (2 mm) paver spacers you can use rubber shim. It helps to make terrace ideally flat.

Cross spacer for pavers **1/16 inch** (2 mm) transparent

Name	Cross spacer for pavers to lay on gravels transparent colour with built in 1/8 inch (3 mm) spacers
Application	• terrace tile
Short name	DDP 002 T
Code	gap spacer 1/8 inch (3 mm) - 10535 gap spacer 3/16 inch (5 mm) - 10560

Paver spacers **SUPPORT PADS**

Paver spacer **5/16 inch** (8 mm)

1 Tile joint

Cross paver spacer 5/16 mm (8 mm) has built in gap spacers 1/8 inch (3 mm) to make joint between tiles. There is possibility to make 3/16 inch (5 mm) joint between tiles using separate spacers.

2 Flexible material

Paver spacers are created from an elastic rubber material so they do not need separate rubber shim for noise cancelling.

4 Modular design

5/16 mm (8 mm) paver spacers were designed modular so it is easy to cut them in pieces.

5 Stackable

With a stackable design you can raise height of the terrace to 5/8 or 17/18 inch (16 or 24 mm).

Rubber paver spacer **5/16 inch** (8 mm)

Name	Rubber paver spacer with built in spacer 1/8 inch (3 mm)
Application	• terrace tile
Short name	DDP 008
Code	gap spacer 1/8 inch (3 mm) - 10018 gap spacer 3/16 inch (5 mm) - 10561
Pedestal height	5/16 inch (8 mm)
Height increase	stackable (up to 3 pcs, max 17/18 inch (max 24 mm))
Pedestal dimensions	4 1/3 × 4 1/3 × 5/8 inch (109 × 109 × 16 mm)
Gap spacers width	1/8 inch (3 mm)
Pedestal load capacity	2500 kg
Material	rubber
Colour	black
Where to use	• exterior decking
Subsurface	• hard subsurface • sensitive subsurface

Paver spacers **SUPPORT PADS**

Paver spacers **6/16** and **3/5 inch** (10 and 15 mm)

The minimum height of the terrace

6/16 and 3/5 inch (10 and 15 mm) paver spacers allows to create a low height terraces.

Tile joint

Cross paver spacer 6/16 and 3/5 inch (10 and 15 mm) has built in gap spacers 1/8 inch (3 mm) to make joint between tiles. There is possibility to make 3/16 inch (5 mm) joint between tiles using separate spacers.

Tile joint

The tile joint can be expanded to 3/16 inch (5 mm) width with using separate gap spacers installed in dedicated holes.

Modular design

6/16 and 3/5 inch (10 and 15 mm) paver spacers where designed modular so it is easy to cut them in pieces.

Stackable

With a stackable design you can raise height of the terrace to 3/4, 1, 1 1/5, 1 3/8, 1 4/7 and 1 3/4 inch (20, 25, 30, 35, 40 and 45 mm).

Alligning tiles

On 6/16 and 3/5 inch (10 and 15 mm) paver spacers you can use rubber shim. It helps to make terrace ideally flat.

DD GROUP
INNOVATIVE PRODUCTS

SPIRAL

SERIES

DD PEDESTALS
we support!

Stepped height regulation from **6/16** to **8 1/3** inch (10 to 210 mm)

SPIRAL series

Where to use

Versatile solution for terraces

SPIRAL Series allows to regulate the height of the terrace in a range from 6/16 to 8 1/3 inch (from 10 to 210 mm). SPIRAL Series has a big load capacity. It is easy to adjust height of each 1/32 inch (1 mm). SPIRAL Series is great to adjust low height levels beginning from 6/16 inch (10 mm). There are plenty of additional compatible accessories.

Low height

Adjustment range from 6/16 inch (10 mm)

Load capacity

Pedestals are resistant for high loads

Height adjustment

Step height adjustment every 1/32 inch (1 mm)

Simple to use

Very simple and quick to use

Self-leveling head

Automatically corrects the slope of the substrate by 0-6%

TILE DECKING

Tiles on the pedestals

Using a spacer disc creates joint between tiles. Choose between 1/8 and 3/16 inch (3 and 5 mm) spacers.

DECKS

Decking joists on the pedestals

Using joist adapter allows to screw them together. It is possible to use joist made of wood, WPC, aluminium.

Pedestal construction

SPIRAL Series pedestal has a modular design. Using height couplers helps reaching heights more than 3 1/2 inch (90 mm).

Under the tiles Under the joists

Pedestal height adjustment

SPIRAL pedestals have a step height regulation. Each step is a 1/32 inch (1 mm) height. Adjustment is done by rotating upper or lower part.

Terrace tiles

Deck

1

Easy installation

SPIRAL pedestals consists just of two parts and spacer disc. That is why it's very fast and easy to use. Assembly with a height coupler is also easy to install.

2

For tiles and decking

Pedestal head allows to mount a spacer disc or joist adapter. It makes SPIRAL pedestals ready to use for tile and decking.

3

High load capacity

SPIRAL pedestals has a very high load capacity.

4

For sloped areas

SPIRAL pedestals can be used on the areas with a radical slope. Using self leveling head allows to compensate slope up to 6%.

5

Rotating spacer discs

Spacer discs can be easily rotated. It allows to regulate the height with tiles laid on it.

6

Easy transportation

SPIRAL pedestals are easy for logistics and because of that transport is cheaper.

SPIRAL series

Image	Name	Where to use	Short name	Code	Dimensions a - length b - width h - height	Example of application
	Gap spacer 1/8 inch (3 mm)	Gap spacers makes 1/8 inch (3 mm) joint gap between tiles.	D3	10441	a - 2 5/9 inch (65 mm) b - 2 5/9 inch (65 mm) h - 5/9 inch (14 mm)	
	Gap spacer 3/16 inch (5 mm)	Gap spacers makes 3/16 inch (5 mm) joint gap between tiles.	D5	10440	a - 2 5/9 inch (65 mm) b - 2 5/9 inch (65 mm) h - 5/9 inch (14 mm)	
	Joist adapter	Helps to fix decking joist to the pedestal.	AD	10000	a - 3 1/3 inch (85 mm) b - 3/5 inch (15 mm) h - 1 1/9 inch (28 mm)	
	Gap spacer 1/8 inch (3 mm)	Individual gap spacers are used to helps to create non grid joints between tiles e.g. along the walls.	L3	10167	a - 1 inch (26 mm) b - 1/8 inch (3 mm) h - 3/7 inch (11 mm)	
	Gap spacer 3/16 inch (5 mm)	Individual gap spacers are used to helps to create non grid joints between tiles e.g. along the walls.	L5	10168	a - 5/8 inch (16 mm) b - 3/16 inch (5 mm) h - 3/5 inch (15 mm)	

Image	Name	Where to use	Short name	Code	Dimensions a - length b - width h - height	Example of application
	Side finishing closure plate	It is used to make vertical masking of the ventilated terrace. Two pieces increase the height of the bracket by 7 mm.	DDP CP	103741	a - 10 1/8 inch (257 mm) b - 10 1/8 inch (257 mm) h - 1/8 inch (3,5 mm)	
	Rubber shim SH145 1/16 inch (1,5 mm)	Noise cancellation and tile thickness compensation. Gives additional height of 1/16 inch (1,5 mm).	SH145	10314	a - 5 5/7 inch (145 mm) b - 5 5/7 inch (145 mm) h - 1/16 inch (1,5 mm)	
	Self leveling head LE MAX 0-6% 3/4 inch (20 mm) height	Self leveling of the terrace with a slope range from 0% to 6%. Gives additional height of 3/4 inch (20 mm).	LE MAX	10680	a - 6 1/5 inch (157 mm) b - 6 1/5 inch (157 mm) h - 3/4 inch (20 mm)	
	Height coupler 2 1/3 inch (60 mm)	Height coupler allows to extend pedestal height with additional 2 1/3 inch (60 mm).	DS 60	104332	a - 5 14/16 inch (150 mm) b - 5 14/16 inch (150 mm) h - 2 1/3 inch (60 mm)	
	SBR rubber pad SBR200, 1/8 inch (3 mm)	Placed under the pedestal gives additional protection of the water membrane. Also gives additional noise cancellation. Gives additional height of 1/8 inch (3 mm).	SBR 200/3	102557	a - 7 7/8 inch (200 mm) b - 7 7/8 inch (200 mm) h - 1/8 inch (3 mm)	
	SBR rubber pad SBR200, 5/16 inch (8 mm)	Placed under the pedestal gives additional protection of the water membrane. Also gives additional noise cancellation. Gives additional height of 5/16 inch (8 mm).	SBR 200/8	102559	a - 7 7/8 inch (200 mm) b - 7 7/8 inch (200 mm) h - 5/16 inch (8 mm)	

DD GROUP
INNOVATIVE PRODUCTS

STANDARD

SERIES

DD PEDESTALS
we support!

Smooth height regulation from **1 3/16** to **16 1/2** inch (from 30 to 420 mm)

STANDARD series

Where to use

Versatile and everlasting

Adjustable pedestal STANDARD Series is a versatile solution for raised outdoor terraces. It allows to adjust the height from 1 3/16 up to 16 1/2 inch (30 up to 420 mm). Smooth height regulation with a rotating screw nut allows to regulate the height even with the tiles on it. For fast height adjustment it can be used with a drill driver bit tool. STANDARD pedestals proved it's quality and usage on thousands of projects in every part of the world. There is a possibility to use with additional accessories.

Self leveling head

Automatically slope compensation from 0 to 7%

Most popular height range

Height adjustment range from 1 3/16 to 16 1/2 inch (from 30 to 420 mm)

High load resistance

Heavy loads pedestals

Screw nut height regulation

Adjust height easily

Versatility

Wide range of accessories

TILE TERRACE

Tiles on pedestals

Using a spacer disc creates joint between tiles. Choose between 1/8 and 3/16 inch (3 and 5 mm) spacers.

DECKING TERRACE

Joists on pedestals

Decking joists on the pedestals. Using joist adapter allows to screw them together. It is possible to use joist made of wood, WPC, aluminium.

STANDARD series

Pedestal design

Pedestal construction

STANDARD pedestal has a modular design
Pedestal height can be extended with a 4 inch (100 mm) height couplers.

Under the tiles Under the joists

Smooth height adjustment

STANDARD pedestals allows for smooth height regulation with rotating screw nut.

Deck

Terrace tiles

STANDARD series

Advantages

1

Easy installation

STANDARD pedestals consists of three parts - base, screw nut and pedestal head with screw. On the pedestal head can be use both cross spacer for tiles and joist adapter for decking.

2

For tiles and decking

Versatile pedestal head allows for using with cross spacer for tiles and joist adapter for decking.

3

Terrace basis

STANDARD pedestals can be used on all types of basis even these with a water membrane protection or XPS. Our recommended minimum hardness for stable usage is 300 kPa.

4

For a sloped surfaces

STANDARD pedestals can be used on the areas with a radical slope. Using self leveling head allows to compensate slope up to 7%.

5

Solid support

Wide pedestal head and self leveling head gives a stable support for tiles and for decking.

6

High load capacity

STANDARD pedestals has a high load capacity.

STANDARD series

STANDARD pedestals

FOR TILES

Cross spacer K3
joint width 1/8 inch (3 mm)

Cross spacer K5
joint width 3/16 inch (5 mm)

FOR DECKING JOISTS

Joist adapter
for wood, composite,
aluminium bars.

STANDARD Series - height range from **1 3/16** to **16 1/2** inch (from 30 to 420 mm)

19 2/3 inch (500 mm)

15 3/4 inch (400 mm)

11 4/5 inch (300 mm)

7 7/8 inch (200 mm)

4 inch (100 mm)

On the soil terraces

Adjustable joist supports for anchor foundation is a stable and everlasting support for decking joists. Terraces supported on them are resistant for rotting due to that joist is not lay on the soil directly. With a smooth height adjustment it is possible to make terrace on any desired height. Using adjustable height supports on the anchor foundation reduce costs of making a full concrete bed under the terrace. Additional advantage is that it keeps water drainage.

Environment friendly solution

Terraces supported with adjustable height anchor foundation unlike traditional concrete bed terraces allows for water drainage and do not interfere surroundings rainwater flow.

Subsurface

Adjustable height joist supports mounted on anchor foundation are allowed to be use directly to soil.

Pedestal construction

Adjustable height joist support placed in anchor foundation provide stable connection.

Smooth height adjustment

Adjustable height joist support for anchor foundation 1 inch (25 mm) (height adjustment 4 inch (100 mm)) allows for a smooth height adjustment with a rotating screw nut.

STANDARD series

Joist supports for anchor foundation

Adjustable deck joist support for anchor foundation with height adjustment 4 inch (100 mm)

Name	Adjustable deck joist support for anchor foundation with height adjustment 4 inch (100 mm)
Application	• terrace with decking
Short name	DDPRPL
Code	102356
Pedestal height range	0 - 4 inch (0 - 100 mm)
Height adjustment	smooth
Pedestal dimensions	4 × 4 × (1 - 5) inch (100 × 100 × (25 - 125) mm)
Pedestal load capacity	1100 kg
Material	plastic
Colour	black with grey screw nut
Where to use	• exterior decking on groundfloor
Subsurface	• hard soil
Included	• adapter • adjustable deck joist support 4 inch (100 mm) for anchor foundation

Metal anchor foundation 160 mm (total length 1000 mm)

Name	Metal anchor foundation 6 1/3 inch (160 mm) (total length 39 1/2 inch (1000 mm))
Application	• terrace with decking
Short name	DDPMFW
Code	102355
Height above the ground	6 1/3 inch (160 mm)
Dimensions	4 2/15 × 4 2/15 × 39 1/2 inch (105 × 105 × 1000 mm)
Material	steel
Colour	silver
Where to use	• exterior decking on groundfloor
Subsurface	• hard soil
Included	• metal anchor foundation

MAX SERIES

DD PEDESTALS
we support!

Smooth height adjustment from **1 3/4** to **37 6/16** (from 45 to 950 mm)

MAX series

Where to use

Professional terraces

Adjustable height pedestals MAX Series is a most advanced and most durable of all our pedestals. Pedestal base and head has a wide diameter which allows for a stable support. Unique double screw gives twice bigger height range with each pedestals. With this unique solution you can reach most popular heights on the projects with only 3 pedestals types. Well designed pedestals construction gives a lot of advantages that makes MAX Series pedestals ready to be used on most advanced requirements projects. MAX Series has a wide range of additional accessories.

Slope correction

8% slope corrector
6% self leveling head

Wide height range

Pedestal with a big height range

For professional contractors

Pedestals resistant to high loads

Wind uplift solution

MAX Series has a solution for winduplift

Stable construction

Possibility for additional stabilisation with wires

TILE TERRACE

Tile terrace

Using a spacer disc creates joint between tiles. Choose between 1/8 and 3/16 inch (3 and 5 mm) spacers.

DECKING TERRACE

Decking terrace

Decking joists on the pedestals. Using joist adapter allows to screw them together. It is possible to use joist made of wood, WPC, aluminium.

Pedestal construction

MAX Series pedestal were designed for a terraces that must be resistant for high loads.

Smooth height adjustment

MAX Series pedestals allows for a smooth height adjustment with rotating screwnut. Additionally there is possibility to adjust height after terrace is installed with a height adjustment key from the top.

Deck

Terrace tiles

Big heights

Wide height range of the MAX pedestals allows to install stable and high terraces. It is also possible to create a flat surface terrace where is huge difference of levels.

For tiles and decking

Pedestal head allows to mount a spacer disc or joist adapter. It makes MAX pedestals ready to use for tile and decking. With this advantage each pedestal can be used on different projects types.

Bottom layer

MAX pedestals can be used on all types of basis even these with a water membrane protection or XPS. Our recommended minimum hardness for stable usage is 300 kPa.

For sloped areas

MAX pedestals can be used on a very sloped surfaces. With using a slope corrector and self leveling simultaneously give in total 14% slope correction possibility.

Wind uplift prevention

Tiles supported with MAX pedestals can be fixed permanently with a windproof solution.

Additional stabilization

Additional stabilizing the structure of the terrace with profiles and tensions cross bracing.

ALU Series

Where to use

Professional usage

The pedestals have a huge weight tolerance.

Can be used on commercial projects that need to meet a fire classification of construction products & building elements. Steel / Aluminium material with a high weight resistance. Height adjustable with a range from 1 4/7" up to 7 7/8" (from 40 up to 200 mm).

ALU Series has a built in self-levelling head. This self levelling head allows to achieve a completely flat surface without any additional accessories.

Fully non-combustible

Made from 100% class A1 material - steel and aluminium.

Self-levelling

Self-levelling up to 6% without additional accessories.

Height adjustment

Smooth height adjustment

Durability

Made of steel and aluminium without plastic or rubber elements.

High weight resistance

Pedestals has a huge weight tolerance (2000 kg).

PAVING TILES

Paving tiles

ALU Series has built in 1/8 (3mm) spacers.

Consists of

ALU Series pedestals were designed for high demand exterior applications and fire resistance.

Smooth height adjustment

ALU Series pedestals have a smooth height adjustment.

Paving tiles

1

Fire resistance

The structure of the pedestals is made entirely of fireproof materials, safety class EURO A1. The pedestals have no plastic or rubber elements.

2

Self levelling

ALU pedestals have a built-in self-levelling head. They automatically level slopes up to 6%. Self-leveling is carried out in all directions without the use of additional accessories.

3

Durability

ALU pedestals are resistant to mechanical damage and cracks. They are also resistant to chemical agents. They are used in places with particularly heavy pedestrian traffic.

4

Gap space

ALU pedestals have built in spacer lugs which creates a 1/8" (3 mm) gap between tiles.

5

Smooth height adjustment

Smooth height adjustment allows for a precise height adjustment in a range between 1 4/7" - 7 7/8" (40-200 mm).

6

High weight resistance

The ALU Series is characterized by a very high load capacity factor. The wide base prevents point loads on the ground, ensuring proper distribution of the terrace weight.

ACCESSORIES

FOR PEDESTALS

DD PEDESTALS
we support!

Additional elements that increase the **functionality** of the pedestals

Accessories for pedestals

Side finishing closure plate

FITS THE SPIRAL, STANDARD AND MAX SERIES

Masking the vertical edge of the raised terrace

The universal side finishing closure plate is used to finish a pedestals raised terrace in places where insight into the internal terrace structure, e.g. external terrace or stairs, is undesirable. It allows the installation of properly prepared plates on the sides of the terrace and protects the final upper plates. With a universal side finishing closure plate, you can use 3/4-1 inch (20-25 mm) thick boards when connecting to the hooks or any thickness when connecting to glue. Increases the height of the bracket by 3/11 inch (7 mm).

Aesthetic finish

The universal side finishing plate allows the aesthetic finish of both the sides and corners of the pedestals raised terrace while maintaining the 1/8 inch (3 mm) wide expansion gaps.

Easy installation

The universal side finishing closure plate gives the possibility of installing the vertical closure in two ways. For hooks (durable and durable solution) or with glue (without visible elements).

Well designed

The design of side finishing plate allows it to be used both on the top and under the pedestals. It is compatible with the Spiral, Standard and Max series.

Side finishing closure plate

Name	Side finishing closure plate
Application	• terrace with tiles
Short name	DDP CP
Code	103741
Compatible series	• SPIRAL • STANDARD • MAX
Connection method	for glue or hooks
Height	1/8 inch (3,5 mm)
Material	plastic
Colour	black
Where to use	• raised outdoor pedestal flooring • terraces with stairs • terraces with a stairs
Included	• side finishing closure plate • clip • plug

Accessories for pedestals

Up to wall clip

Perimeter up to wall clip

The perimeter up to wall clip is placed on the head of the pedestals at vertical surfaces reaching over the height of the terrace, e.g. at the wall or high wall. It prevents plates from moving. Provides free water flow, preventing unwanted moisture.

Tile joint

The use of an perimeter up to wall clip allows obtaining an even gap between the plates and the wall.

Up to wall clip

Name	Up to wall clip
Application	• terrace with tiles
Short name	DDPWAP
Code	104368
Compatible series	• SPIRAL • STANDARD • MAX
Connection method	tile gap spacers, the weight of the tiles
Height	3/32 inch (2,5 mm)
Material	plastic
Colour	black
Where to use	• terrace along the wall
Included	• up to wall clip

No moisture

The perimeter up to wall clip means that the water does not insist between terrace plates and the wall.

Tiles protection

It prevents the tiles from moving on the edge of the terrace by the wall.

Accessories for pedestals

Drill driver bit tool

Drill driver bit tool

The pedestal turning tool is an element used to quickly change the height of the pedestals.

The accessory makes it easier to adjust the Standard and Max series pedestals.

Screwdriver is needed to use the pedestal turning tool.

Regulation speed

The pedestal turning tool accelerates the pedestal height regulation process, thus significantly shortening the time of the raised terrace.

Drill driver bit tool

Easy installation

The pedestal turning tool for the screwdriver has a universal hexagonal tip compatible with each screwdriver.

Easy to use

For quick pedestal height adjustment, insert bit into the pedestal head holes. Using the screwdriver by screwing or unscrewing, the height of the pedestal change its height.

Name	Drill driver bit tool

Accessories for pedestals

Rubber shim SH

Rubber shim SH

Rubber shim can be comprehensively used when making terrace with adjustable pedestals. Whenever it needs to tiles thickness adjust or make additional soundproof rubber shim are perfect solution. No more sand grain cracking under your tiles. Additional vibration absorption and noises mute

Soundproof

The main task of rubber shims is to soundproofing sounds that may appear between the pedestals and the terrace tiles.

Rubber shim SH

(* variants for individual series)

Name	Rubber shim SH
Application	• terrace with tiles
Size Compatible series • Short name (code)	1. \varnothing 4 inch (100 mm) (support pad 5/16 inch (8 mm), STANDARD Series) • SH100 (10399) 2. \varnothing 5 5/7 inch (145 mm) (support pads 6/16 and 3/5 inch (10 and 15 mm), SPIRAL Series, MAX Series) • SH145 (10314) 3. \varnothing 6 8/9 inch (175 mm) (support pad 16 mm) • SH175 (10318)
Height	1,5 mm
Material	rubber
Colour	black
Where to use	• noise cancelling the upper part of the pedestals • equalizing the differences in the thickness of the tiles.
Included	• SH rubber shim for the selected series

Aligning tiles

Ruberh shims can be used to equalize the differences in the thickness of the tiles. Just put part of rubber shim under the tile with a lower height to get an equal surface of the terrace.

Easy installation

The size and shape of the SH rubber shims is adapted depending on the type of terrace stand or the pedestals series. Just put rubber shim on the pedestal head.

Accessories for pedestals

SBR rubber pad

SBR rubber granules pads

Rubber pads are used and placed under pedestals base. They are used for additional protection against damage to sensitive substrates such as waterproofing. An additional function of rubber pads is to mute the terrace between the pedestals and the ground. All series of pedestals have the ability to use SBR rubber granules pads in the size adapted to them. Increases the height of the bracket by 1/8 or 5/16 inch (3 or 8 mm) depending on the variant.

Noise cancelling

The rubber pad eliminates possible unwanted sounds that may arise between the bracket and the ground, e.g. due to sand grains.

SBR rubber pad

(* variants of size and height)

Sensitive substrates

It protects sensitive substrates (e.g. waterproofing) against damage.

Different sizes

The rubber pads are intended for all series of pedestals in various sizes dedicated to them.

Name	SBR rubber pad
Application	<ul style="list-style-type: none"> terrace with tiles terrace with decking

Included	<ul style="list-style-type: none"> rubber granules pad in the selected size and height

Accessories for pedestals

Self leveling head

Equally leveled terrace surface on a sloped area

The self-leveling head is used to make terrace structures equally leveled on the area with a slope. It is possible to use it both for plates and for joists. The self-leveling head is available in two versions - LE for the Standard and LE Max series for the Spiral and Max series. Self leveling head increase the height of the bracket by 5/8 inch (16 mm) (LE MAX 3/4" (20 mm)).

Basis layer with a slope

The self-leveling head allows to make an equally leveled terrace on the substrates with a slope of up to 7% (LE MAX 6%) slope.

Self leveling head

Easy installation

The LE and LE Max self-leveling head is applied to the pedestal head. The hooks keep it firmly on the pedestal head.

Self-leveling

The use of the head causes self-leveling of the tiles under their own weight - no manual adjustment is required.

Name	Self leveling head LE	Self leveling head LE MAX
Application	• terrace with tiles	• terrace with tiles

Accessories for pedestals

Key from the top

Pedestals height adjustment

The height regulation key from the top to adjust the small heights is used to change the height of the pedestal on the finished terrace. It helps reduce possible differences and cavities in the terrace surface after tiles installation. The height adjustment key from the top can be used for terraces placed on the max series with a self-leveling head only.

Ability to level surface after pavers have been installed

The height adjustment key to adjust the height is used to change the height of the pedestal by leveling surface after pavers have been installed.

Key from the top

Name	Key from the top
Application	• terrace with tiles
Short name	MPK
Code	10744
Compatible series	• MAX with a self leveling head
Material	metal
Colour	silver
Where to use	• small height adjustments of the pedestals after pavers have been installed
Included	• key from the top

Simple regulation

The use of the height adjustment key from the top allows you to adjust the small height of the bracket without the need to disassemble the discs. The key is located in 1/32-1/16 inch (1-2 mm) gaps between the plates.

Height adjustment

The adjustment key allows you to make a small height adjustments.

! TO USE A HEIGHT ADJUSTMENT KEY IT IS NECESSARY TO USE MAX SERIES WITH A SELF LEVELING HEAD.

RAPTOR

SERIES

Step height regulation from **3/5** to **9 2/3** inch (from 15 to 245 mm)

RAPTOR series

Application

Versatile and durable decking

Adjustable deck supports RAPTOR for decking terrace application. RAPTOR Series has a step regulation with each step abt. 1/32 inch (1 mm). With it`s design they can be used for decking made of wood, composite with joists made of wood, WPC or aluminium. Wide pedestal base gives a solid support. There are additional accessories extending possibilities of application.

Faster deck installation

Easy to use design and joist adapter make installation much faster.

Durability

Pedestals resistant for high loadings

High precision of height adjustment

Step height adjustment 1/32 inch (1 mm).

Universal application

For exterior decking and interior raised floors.

Low heights

Low height starts from 3/5 inch (15 mm).

Slope corrector

Slope correction up to 7%

JOIST DECKING

Joist decking

Adjustable deck supports RAPTOR for decking terrace application. In built joist adapter which helps for fast fixing joist to the pedestal.

RAPTOR series

Pedestal design

Pedestal construction

RAPTOR Series pedestal consists of two parts - top wedge and the base. Reaching heights more than 5 inch (125 mm) can be with adding height raiser on the base bottom.

Height adjustment

Adjustable pedestals RAPTOR have a possibility to adjust height with a top wedge. Adjustment can be done by moving up and down top wedge. Each step is a 1/32 inch (1 mm).

RAPTOR series

Advantages

1

Easy installation

In built joist adapter which helps for fast fixing joist to the pedestal.

2

Stable pedestal base

Huge stability of the support due to proper size of the base.

3

For sloped areas

RAPTOR Series pedestals can be used on the surfaces with a large sloped area. Using a slope corrector allows to compensate slope up to 7%.

4

Fix it together

Easy to fix parts together with dedicated holes. The upper and lower part of the pedestals can be permanently connected by a screw.

5

Water outflow

All system components have mounting holes and holes for water flowing thanks to which it is resistant to its operation.

6

Fastening to the substrate

Mounting holes allowing optional attachment to the bottom surface. The pedestals can also be glued to a quick-drying mounting adhesive for sensitive surfaces such as water membrane.

Pedestal height range	6 1/10 - 7 2/7 inch (155 - 185 mm)
Height adjustment	step height regulation (1/32 inch (1 mm))
Pedestal dimensions	4 3/4 × 4 3/4 × (6 1/10 - 7 2/7) inch (120 × 120 × (155 - 185) mm)
Pedestal load capacity	1000 kg
Material	plastic
Colour	black
Where to use	• external decking • interior raised floors
Subsurface	• hard subsurface • sensitive subsurface • sloped surface
Included	• RAPTOR pedestal XL • height coupler P30 (2 pcs.)

RAPTOR series

RAPTOR pedestals

RAPTOR pedestal XL3

RAPTOR pedestal XL4

Name	RAPTOR pedestal XL3
Application	• terrace with decking
Short name	RAPTOR XL3
Code	10906 + 3× 10907
Pedestal height range	7 2/7 - 8 1/2 inch (185 - 215 mm)
Height adjustment	step height regulation (1/32 inch (1 mm))
Pedestal dimensions	4 3/4 × 4 3/4 × (7 2/7 - 8 1/2) inch (120 × 120 × (185 - 215) mm)
Pedestal load capacity	1000 kg
Material	plastic
Colour	black
Where to use	• external decking • interior raised floors
Subsurface	• hard subsurface • sensitive subsurface • sloped surface
Included	• RAPTOR pedestal XL • height coupler P30 (3 pcs.)

Name	RAPTOR pedestal XL4
Application	• terrace with decking
Short name	RAPTOR XL4
Code	10906 + 4× 10907
Pedestal height range	8 1/2 - 9 2/3 inch (215 - 245 mm)
Height adjustment	step height regulation (1/32 inch (1 mm))
Pedestal dimensions	4 3/4 × 4 3/4 × (8 1/2 - 9 2/3) inch (120 × 120 × (215 - 245) mm)
Pedestal load capacity	1000 kg
Material	plastic
Colour	black
Where to use	• external decking • interior raised floors
Subsurface	• hard subsurface • sensitive subsurface • sloped surface
Included	• RAPTOR pedestal XL • height coupler P30 (4 pcs.)

Image	Name	Where to use	Short name	Code	Dimensions a - length b - width h - height	Example of application
	Height coupler 1 3/16 inch (30 mm)	Height coupler allows to extend pedestal height with additional 1 3/16 inch (30 mm).	P30	10907	a - 4 3/4 inch (120 mm) b - 4 3/4 inch (120 mm) h - 1 1/5 inch (30 mm)	
	Base slope corrector 0-7%, 6/16 inch (10 mm) height	Base slope corrector helps to compensate slope of the terrace and makes pedestal stay vertical even if staying on uneven sloped surface. Gives additional height of the pedestals 6/16 inch (10 mm).	KN	10908	a - 8 inch (203 mm) b - 6 1/4 inch (158 mm) h - 6/16 inch (10 mm)	
	Paver spacer 1/16 inch (2 mm)	It is placed under tiles corners. Gives additional protection for water membrane. Prevent tiles corner displacement. Gives additional height 1/16 inch (2 mm).	PO	107483	a - 4 7/8 inch (124 mm) b - 4 7/8 inch (124 mm) h - 1/16 inch (2 mm)	
	Acoustic pad 6/16 inch (10 mm)	It is places under the pedestals and gives additional noise protection. Gives additional height 6/16 inch (10 mm).	PA	107484	a - 4 7/8 inch (124,2 mm) b - 4 7/8 inch (124,2 mm) h - 6/16 inch (10 mm)	
	SBR rubber pad SBR170, 1/8 inch (3 mm)	Placed under the pedestal gives additional protection of the water membrane. Also gives additional noise cancellation. Gives additional height of 1/8 inch (3 mm).	SBR 170/3	102557	a - 6 2/3 inch (170 mm) b - 6 2/3 inch (170 mm) h - 1/8 inch (3 mm)	

DD GROUP
INNOVATIVE PRODUCTS

LAWN

EDGING

Nice looking finishin landscapin edges

Lawn edging

Where to use

Esthetic garden finishing

Lawn edging is for finishing separate garden areas.

Lawn edges can be used with any height of pavers.

They are resistant to chemicals and UV rays.

Fits to every paver height.

1

Finishing

It is possible to finish the edges using metal strips (stainless steel and Corten).

2

Arches

It is possible to bend lawn edges. It is possible to adjust bending any arc, circles designs.

3

Connection

Easy to connect lawn edges together.

4

Side stabilization

Lawn edges are stabilised with its nails.

5

Design

Design of the lawn edges provides additional stabilisation. It is possible to lay electric wires and or water hose along.

6

Easy installation

Easy fixing to ground with nails.

DECKING INSTALLATION **ACCESSORIES**

Simple and fast installation

Hidden deck fasteners

Hidden deck fasteners system

The hidden deck fastener system allows to fix the terrace planks to the joists without screw visible on the top of the terrace surface. With this solution decks become more natural. Each plank can be disassembled immediately without plank surface damage. This is worldwide patented system where plank is separated from the joist and there is no rotting process underneath which destroys decking. With a oiling decking from the top only decking becomes everlasting.

Patented decking assembly system

Invisible fixing

Planks to not have visible screws on the top

Durability

Invisible deck fasteners resistant to external weather conditions.

Universal

Possibility to use with all kind of wood species

Durability

Fasteners fixed planks with joists firmly

Security

No screws visible on the top

Installation

Hidden deck fasteners are fixed to planks from the bottom. Each plank is fixed invisible to the joists in joint between planks,

Hidden deck fasteners

1 Invisible fixing

With fasteners terrace planks are invisibly fixed to the joists. There is no visible screws on the top.

2 Planks gap

Using hidden deck fasteners creates equal gap between planks.

3 Size

Fasteners are available in three sizes that fits to all standard terrace planks widths.

4 Easy installation

Hidden deck fasteners helps with easy, fast and everlasting decking installation.

Hidden deck fastener DECK-DRY - clip with screws included, plank width 3 3/11 - 3 1/2 inch (83-90 mm) (31 pcs/sqm)

Name	Hidden deck fastener planks width 3 3/11 - 3 1/2 inch (83-90 mm)
Application	• Deck with small width planks
Short name	LT9
Code	10198
Height	3/5 inch (15 mm)
Plank width	3 3/11 - 3 1/2 inch (83 - 90 mm)
Material	plastic
Colour	black
Included	• Hidden deck fastener DECK-DRY - clip with screws included, plank width 3 3/11 - 3 1/2 inch (83-90 mm) (31 pcs/sqm)

Hidden deck fasteners

Hidden deck fastener DECK-DRY - clip with screws included, plank width 4 2/5 - 4 3/4 inch (112 - 121 mm) (24 pcs/sqm)

Name	Hidden deck fastener planks width 4 2/5 - 4 3/4 inch (112-121 mm)
Application	• Deck with medium width planks
Short name	LT12
Code	10199
Height	3/5 inch (15 mm)
Plank width	4 2/5 - 4 3/4 inch (112 - 121 mm)
Material	plastic
Colour	black
Included	• Hidden deck fastener DECK-DRY - clip with screws included, plank width 4 2/5 - 4 3/4 inch (112 - 121 mm) (24 pcs/sqm)

Hidden deck fastener DECK-DRY - clip with screws included, plank width 5 3/7 - 5 5/7 inch (138 - 145 mm) (20 pcs/sqm)

Name	Hidden deck fastener planks width 5 3/7 - 5 5/7 inch (138-145 mm)
Application	• Deck with large width planks
Short name	LT14
Code	10200
Height	3/5 inch (15 mm)
Plank width	5 3/7 - 5 5/7 inch (138 - 145 mm)
Material	plastic
Colour	black
Included	• Hidden deck fastener DECK-DRY - clip with screws included, plank width 5 3/7 - 5 5/7 inch (138 - 145 mm) (20 pcs/sqm)

T5X30G	10342	a - 1 31/32 inch (50 mm) b - 17/18 inch (24 mm) h - 17/36 inch (12 mm)	

Decking installation accessories

SBR interlocking pin

SBR interlocking pin

SBR tiles are most popular on playgrounds and gym. It's elastic surface absorbs falls and prevent serious injuries. SBR interlocking pins are used to connect tiles together. With interlocking pin tiles are not moving and not creates gap between them.

SBR interlocking pin

Name	SBR interlocking pin
Application	• Connecting SBR rubber tiles
Short name	PIN SBR
Code	10240
Length	2 1/2 inch (63 mm)
Diameter	5/13 inch (9,8 mm)
Material	TPV
Colour	black
Included	• SBR interlocking pin

Easy installation

Interlocking pins are easy to use. Just place pin into hole in the SBR tile edge and connect with each other.

Decking installation accessories

Rubber deck joist pads

Rubber deck joist pads (3 1/6 × 1 4/7, 1/8 inch)
(80×40, 3 mm)

Name	Rubber deck joist pads 3 1/6 × 1 4/7, 1/8 inch (80×40, 3 mm)
Application	• Decking rubber joist pad
Short name	FIX3
Code	10131
Height	1/8 inch (3 mm)
Length	3 1/6 inch (80 mm)
Width	1 4/7 inch (40 mm)
Material	rubber
Colour	black
Included	• Rubber deck joist pads (3 1/6 × 1 4/7, 1/8 inch) (80×40, 3 mm)

Rubber deck joist pads

Rubber deck joist pads can be used for versatile usage. It prevents vulcanization of elements, vibration etc. It can be used in every situation when there is a need to support something.

Rubber deck joist pads (3 1/6 × 1 4/7, 5/16 inch)
(80×40, 8 mm)

Name	Rubber deck joist pads 3 1/6 × 1 4/7, 5/16 inch (80×40, 8 mm)
Application	• Decking rubber joist pad
Short name	FIX8
Code	10132
Height	5/16 inch (8 mm)
Length	3 1/6 inch (80 mm)
Width	1 4/7 inch (40 mm)
Material	rubber
Colour	black
Included	• Rubber deck joist pads (3 1/6 × 1 4/7, 5/16 inch) (80×40, 8 mm)

Rubber deck joist pads

Rubber deck joist pads can be used for versatile usage. It prevents vulcanization of elements, vibration etc. It can be used in every situation when there is a need to support something.

TERRACES

INSTALLATION

Practical tips for raised pedestals terraces installation.

Terraces **installation**

Practical **tips**

Type of the sub surface

When installing terrace with using adjustable pedestals, pay attention to the sub surface. Depen on type of the material surface underneath pedestals it can require additional accessories.

Works planning

When estimating quantity of the pedestals needed for a project remember about not typical geometry as e.g. edges along the wall, corners, arcs etc.

Terrace height

When estimating total height of the terrace height remember to take into account thickness of the material eg. total height of the tiles, planks, joists.

Joint gap

When making terrace with pedestals remember about joint gaps. It is important to make joint gaps wheter terrace is made of tiles of decking planks.

Suitable accessories

SPIRAL, STANDARD, MAX you can use for tiles and decking terraces. For using with tiles use gap spacers and for decking use joist adapter.

Additional accessories

Remember to use additional accessories as universal WPC clips or SBR rubber pad - it makes installation easier and raise overall comfort of terrace using.

Terraces **installation**

Practical **tips**

Unequal tile thickness

Not all tiles have the same thickness. To avoid visible differences on the deck surface, use rubber shim SH that can easily be cut into pieces. Rubber shim can easily align tiles to the same thickness.

Pedestals in the water

Raised floor terraces with pedestals can be used with water facilities like fountains, pools, etc. However, it is important to remember to release the water for a winter period to avoid water freezing inside the pedestals, which can lead to their damage.

Subsurface with a slope

Raised terraces with pedestals allow for creating a flat surface on top of the terrace, even if the surface underneath has a slope for water drainage. Self-leveling head and slope corrector can help with leveling the surface.

Large tile formats

Tiles with a large format may need additional pedestal support along the edges.

Large tile formats

Tiles with a large format may require additional support in the center. Place a pedestal with a plain head under the tile. Ask your tile supplier about recommended support between pedestals.

Covering the edges

To cover the edges, it is necessary to use a vertical edge clip. The vertical edge clip allows for the installation of tiles that cover the gap between the tiles and the terrace bottom surface.

Terraces **installation**

Practical **tips**

Joint spacers

Pedestals has spacer lugs gaskets that makes gap between tiles. There are available sizes 1/8 and 3/16 inch (3 and 5 mm).

Fixing pedetals I

If there is no water membrane on the terrace surface pedestals can be fixed to the bottom surface with rawplugs or screws.

Fixing pedetals II

Fixing pedestals to the bottom surface is not possible if there is water membrane on the roof. In this case we recommend to fix pedestals with glue if needed.

Decking terraces

For installation decking with joists use pedestals with joist L adapter. It is possible to use all types of joists as wood, WPC, aluminium.

Fixing joists

To fix joists with pedestals use screws. It is recommended to fix joists to avoid displacement.

Pedestals spread distance

The distance between each pedestal depend on the type of the joist. Ask your joist supplier for recommended distance between pedestals.

Terraces **installation**

Pedestals **usage**

Tiles support

When calculating pedestals quantity always consider support distance, tiles thickness and hardness.

Pedestals can be used with all types of terrace tiles.

ASK YOUR TERRACE TILES SUPPLIER FOR RECOMMENDED DISTANCE BETWEEN PEDESTALS.

Standard tiles

- standard support in each corner.

Support for large formats

- in each corner with additional center support.

Long tiles

- in each corner with additional pedestals in the longe edges.

Support for large and long tiles

- in each corners and additional support long edges and center support.

Terraces **installation**

Pedestals **usage**

DD GROUP

About us

DD GROUP
INNOVATIVE PRODUCTS

DD GROUP

We believe that there are simple solutions for a difficult problems.

We have a long time experience with exterior terraces and decking. We see much more details in it. For us and for most of people this is the favorite „room“ in home if only weather is good to go outside.

We are a Polish manufacturer and we have a full control over production process. We take a full responsibility for our products.
