

DECKING ACCESSORIES

HIDDEN DECK FASTENERS

Deck-Dry - system for wooden terraces hidden moutage

Wooden terraces (decks, terraces, backyard, picnic pads, boardwalks) world-renowned and exclusive outdoor wooden terraces offered to the most demanding clients through our innovative system compared to other systems, Deck-Dry system offers the best parameters:

- boards do not rot from the bottom, drips joined with Deck-Dry distancing units eliminate water under-dripping, leaving connections in aerial-dry condition,
- boards are not "punctured", boards are replaceable
- avoiding interference with water insulation of the base without the need of mounting to the base,

Boards with drips eliminate water under-dripping thanks to the innovative * distancing units, so that the bottom of the board stays in aerial - dry condition. In this case, no fungus type Zygo-, Asco-, Basidio-, Deutero-, -mycetes can develop, allowing each piece of wood to reach up to 100 years durability**. Only the top part of the board is vulnerable to environmental factors (rain, snow sun, UV - rays). Therefore it should be preserved through oiling (1 - 3 times a year) to achieve the same durability on top of the board as on the bottom *International Patent US 7437194B2, EP7392937 **wg. Kollmann F. „Principles of wood science and technology" Springer Verlag New York.

DECK-DRY®

	Name	Code	Box	Pallet

2	hidden deck fastener DECK-DRY 120 MM with screws	LT12	40	--
3	hidden deck fastener DECK-DRY 90 MM with screws	LT9	40	--

JOIST PROTECTION TAPE

Protects joists from rotting

WATER PROTECTION

- Joist protection tape is made of material which is 100% waterproof.

SOUND PROOF

- Joist protection tape additionally reduce noises when using the deck.

SELF ADHESIVE

- Self adhesive surface allows to easy application

Ultimate solution to protect decking joists. Average deck in good conditions after 5-10 years start rotting in the place where boards stick with joists.

Joist protection tape ensure the joists will last longer and there will be not constant humidity between joist and plank which cause damage. Joist protection tape is an affordable solution that ensures maximum life and durability of your deck all year round.

SBR GRANULAR RUBBER PADS

Rubber pads for deck under construction

WATER PROTECTION

Protects wood from moisture and rot. Allows water rain freely run down under the terrace.

SOUND INSULATION

Reduce noises and knocks during decking usage.

COMFORT OF USAGE

Affects the comfort of everyday use

Terrace joists which lay on the basis stick to the ground where constant moisture leads to its damage. Granular rubber pads allows to protect wooden decks and joists from moisture, premature wood rot and stagnant water. Additionally pads are ideal to adjust height of the terrace. Granular rubber pads for decking terraces are made of durable and flexible material. Different thicknesses allow to use in any condition.

DECKING TERRACE ACCESSORIES

Additional accessories for terraces

DECK BOARD STRAIGHTENER

Solid and durable deck board straightener is used for tightening terrace boards during decking mounage

PVC JOIST 30X50 MM

Very heavy and rigid joist for terrace deck undercostruction. Made of 100% PVC what makes it indestructible and no rot. Non flammable and good for point bearing usage with adjustable pedestals.

RUBBER PADS FIX 80X40X3 MM, 80X40X8 MM

Versatile rubber pads for any usage in construction and building. Fully resistable on external and UV atmospheric conditions.
