

# SUPPORT PADS FOR TILES

## STACKABLE AND FIXED HEIGHT

Fixed height support pads with heights 2mm, 8 mm, 10 mm, 15 mm, 16 mm

Support pad 2 mm  
transparent / black  
availability May 2019

Rubber support pad 8 mm  
**DDP 017-030 MM**

Support pad 10 mm  
**DDP 010 MM**

Support pad 15 mm  
**DDP 015 MM**

Support pad 16 mm  
**DDP 016 MM**

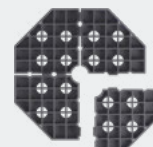

**Plastic support pads are designed for use with paving slabs on balconies, flat roofs and terraces.** Manufactured from injection moulded high density polypropylene. They are available in three standard sizes, 10mm, 12mm and 15mm thick. All our plastic supports come with 3mm lugs as standard. 10 & 15mm supports can be supplied with 5mm lugs if required on special request. They are designed to stack on top of one another, where installers wish to increase the height of the cavity at intervals – to work around gutter and service pipes, for example. Although lightweight, they are very tough, with **a weight tolerance of 400kg per support pad.** By suspending the paving, they allow water to run away from the deck underneath. They also help to prevent the build-up of dirt and other material between the slabs. This system eliminates ponding on the upper surface of the roof or balcony paving. 1,2 and 3mm leveling shims are also available to allow for undulations in the roof surface and minor variation in paving slab thickness.

Stackable

Modular

Elastic rubber material of 8 mm support pad

Additional 5 mm gap spacers
